

xchangedocs

Safely share or serve documents of any size

Sending legal documents by email, memory sticks or public file-sharing services is risky and cumbersome. Email systems can block large file attachments, necessitating costly courier delivery. What if there was an easy way to share your sensitive legal documents safely and privately among the parties associated with a matter?

Xchangedocs Features

- Send files of any size, without limit or additional cost
- Documents viewable only by authorized parties
- Email notifications alert recipients to new documents
- Real-time audit trail tracks documents received and opened
- Integrated with ACL5 for one-click document sharing
- Serve parties electronically without the need for an Affidavit of Service or process serving*

*Per Ontario Rules of Civil Procedure. Requires activation on ACL.

Minimize Risk

Eliminate the risk of exposing confidential documents to unauthorized parties. xchangedocs ensures that documents are shared only with the intended recipients or parties on a specific matter.

Share files with no size limitation

Law firms send massive documents and files that email can't process, including engineering blueprints, medical images and video files. xchangedocs handles documents of any size so you don't need to split files or resort to physical media.

Boost your productivity

Exchange, share or serve documents instantly with pre-defined matter participants — no need to re-key party contact information. Documents can be sent directly from ACL5 with a single click. And all share activity is logged and searchable by matter.

Eliminate email misdirects

Sending an email to the wrong party is every lawyer's biggest fear. xchangedocs ensures your confidential email communications only go to intended parties. You can also revoke access to documents when needed.

Access and share documents anywhere

xchangedocs works with web browsers on your computer or choice of mobile device. Whether you're working from the office or elsewhere, your documents are protected, safe and synchronized with your ACL files.

Privacy and confidentiality compliance ensured

All documents and files shared through xchangedocs are encrypted in transit and at rest. Only the intended recipients can view them. All file data resides in Canada on Microsoft Azure, fully meeting Canadian lawyers' professional privacy obligations.
